important!

how to use

the famous Jon-ē

follow directions exactly

Caution! Use only these fuels for best results. ***Jon-e' Fluid*** (in 8 and 16 oz. cans with handy pouring spout), Energine (inflammable) cleaning fluid, regular naptha, stove & lamp (white) gasoline. Some lighter fluids will not work, however these give fair results. Energine lighter fluid, Zippo, Ronsonol and Gulf. Never use leaded gasoline, it will destroy the heating element.

just follow these simple directions

1 Remove the perforated top cover.

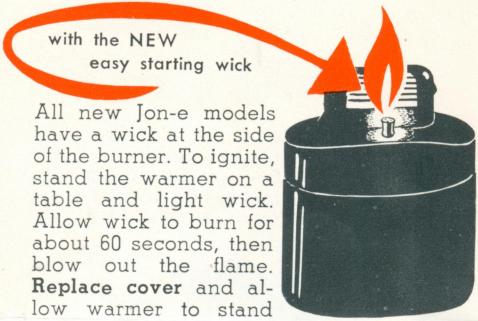
2 Lift off the burner. Do not touch the heating element (shown here in red). Dirt or oil from fingers will damage it.

3 Slowly fill base with Jon-e' Fluid until absorbent is saturated (about 1 oz. for Standard-size, 3½ oz. for Giant). For substitute fuels use only those listed in the first paragraph. Never use leaded gasoline.

4 IMPORTANT. After filling base, turn upside down and shake out any excess fluid. Wipe off any spilled on outside.

5 Carefully replace the burner.

6 How to light NEW style Jon-e



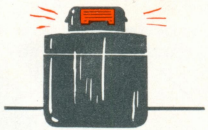
All new Jon-e models have a wick at the side of the burner. To ignite, stand the warmer on a table and light wick. Allow wick to burn for about 60 seconds, then blow out the flame. **Replace cover** and allow warmer to stand without handling.

Patent Pending

To extinguish burner . . .

Pry off burner with knife or edge of perforated cover. It will go out in about 30 seconds. Replace burner and cover. It will not re-ignite until again lighted.

7 HEAT WITHOUT FLAME

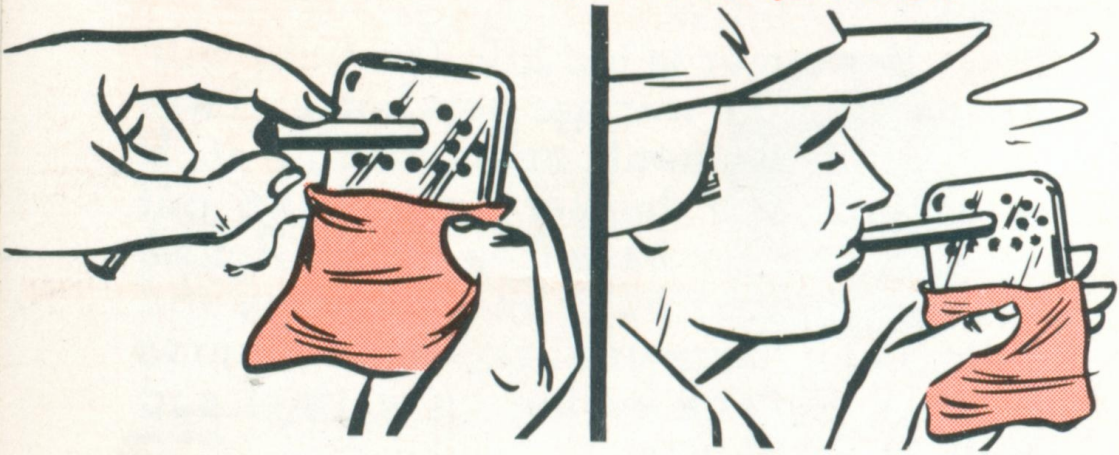


Let warmer stand with cover on for 6 to 10 minutes without handling to allow burner to completely ignite. Then place the warmer in the flannel carrying bag before carrying it in pockets or mittens. This will give you just the right amount of heat.

Note: If warmer is too full, the fluid will expand after the warmer gets hot, and wet the heating element, extinguishing it. If so, remove the burner and shake out excess fluid from base (see fig. 4). Before replacing burner put it on an ash tray and ignite. Let it flame until excess fluid burns off. Then replace burner on warmer and ignite in usual way.

WARNING! Jon-e Warmers are made to get **hot**. Use with care. To avoid a burn always keep in carrying bag and DO NOT ALLOW WARMER TO REMAIN ON ONLY **ONE AREA** OF YOUR BODY. Move it every few minutes.

LIGHTS YOUR CIGARETTES



To use as a lighter wait until the warmer is heating at a high temperature. Then insert a cigarette into the special hole in the cover and gently press the cigarette against the burner. Puff until cigarette is lit.

Use your warmer properly

Your Jon-e Warmer will last a lifetime if you follow directions and give it reasonable care. ***Remember:***

1. Use only Jon-e Warmer Fluid, the fast igniting, longer lasting fuel. Cans have special inverted, non-leaking, handy pouring spouts. For substitute fuels see first paragraph of this folder.

2. Use care when filling. Keep flame and lighted cigarettes away. This fluid is very inflammable.

3. Never fill with low grade lighter fluid, alcohol, Ethyl or leaded gas. These will destroy the burner.

4. Don't fill warmer until just before using.

5. Don't touch or blow on the burner.

Always use Jon-e Fluid

On one filling of fluid, the Standard Size Jon-e heats for one full day, the Giant Size, two full days.

8 oz. can, 59¢, 16 oz. can, 95¢

Best fluid for cigarette lighters, too

If the burner is lost or damaged, send **$1.50** for burner for Standard size model.

$2.00 for burner for Giant size model.
